Reviews

*Complete guide! Its this kind of very good read through. This is certainly for all who statte there was not a worthy of looking at. I am just quickly will get a delight of looking at a composed publication.
(Kacie Carroll)*

LASER INDUCED DAMAGE IN OPTICAL MATERIALS VOLUME 1848; PROCEEDINGS OF A SYMPOSIUM SPONSORED BY THE AMERICAN SOCIETY FOR TESTING AND MATERIALS AND BY THE NATIONAL BUREAU OF STANDARDS

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 218 pages. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1993 Excerpt: . . . organic glass upon removal of the water. Successful complexants used in this laboratory include the simple amino acid glycine ($\text{H}_2\text{NCH}_2\text{COOH}$), urea (H_2NCONH_2), or carbonylhydrazide ($\text{H}_2\text{NNHCOHNNH}_2$). In terms of cost and ability to complex a wide variety of cations (differing size and charge), glycine is preferred. 2 It also acts as a zwitterion in solution thereby enhancing its ability to encage cations. $\text{H}_2\text{NCH}_2\text{COOH} \rightleftharpoons \text{H}_3\text{NCH}_2\text{COO}^-$. (1) The viscosity of the solution is adjusted through evaporation of water, and optical films are deposited on silica or silicon substrates by dip-coating or spin-casting methods. Thermal annealing at temperatures above 200 C initiates an auto oxidation-reduction reaction whereby the organic complexant and nitrate react to form nitrogen, carbon dioxide and water vapor. The pure metal oxide(s) are left behind in a homogeneous film. This process is similar to a combustion reaction and on a large scale, a vigorous exothermic reaction ensues producing a fine ash of nanosize ceramic powder. 11 However, in the thin film, the reaction is much more quiescent. Variations in the ratio of complexant to nitrate and the use of alternate complexants such as urea or carbonylhydrazide will affect the reactivity which can lead to the formation of different crystalline phases in the annealed film. 3. EXPERIMENTAL 3. 1. Solution preparation, film deposition, and thermal treatment Dilute aqueous stock solutions of zirconyl nitrate, $\text{ZrO}(\text{NO}_3)_2$, samarium nitrate, SmfNO_3 , glycine, and a 2: 1 mixture of urea-carbonylhydrazide were prepared and standardized. Metal nitrate solution concentrations were on the order of 1 g/ml, and the organic complexant...
