This report describes the significant progress made in four areas of this subcontract: process and equipment development; efficiency improvement; characterization and analysis; and environmental, health, and safety. As part of the process and equipment development effort, vapor-transport deposition (VTD) was implemented first on a 60-cm-web pilot-production system, then on a 120-cm-web high-throughput coater. Deposition of CdS and CdTe films at a throughput of 3 m<sup>2</sup>/min was demonstrated, and more than 56,000 plates (each 0.72 m<sup>2</sup>) were coated -- 16 times the total number coated prior to the start of the contract.
