The fundamental paradigm of cloud computing, whether it is for private or public usage, revolves around the provisioning of services for everyone through rich resources that can be synergized through Internet-based protocols. The true definition of Cloud Computing is, according to the author, all about the practicalities of 'outsourcing' all aspects of using computing resources to some form of external 'agency'. This means that the assumption for any cloud computing usage is the fact that the 'agency' has a powerful resource base (hardware, software, infrastructure, platforms, power supply, backups, failover mechanisms as well as management skills). Therefore, all users of the cloud computing services provided by the 'agency' can work in a well-defined 'demand-supply' mode, with an insurmountable base of...
