RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 54 pages. Original publisher: Golden, CO : National Renewable Energy Laboratory, 2006. OCLC Number: (OCoLC)173261703 Subject: Wind power. Excerpt: . . . Transmission System Availability Existing analyses on historic flows on major transmission paths in the Western Interconnection suggest the existing transmission system could be utilized more efficiently and provide transmission capacity for new wind resources. SSG-WI has conducted an analysis of actual flows for the years 1998-2002 using data from the WECCs Extra High Voltage database. The graph below shows summary data from SSG-WIs 2003 report on actual flows. The figure below shows the percentage of time that major transmission paths reached at least 75 of the Operating Transfer Capacity (OTC) limit during the highest summer, spring, and winter season from 1998-2002. The data suggest that many paths operate significantly below their physical capacity. Estimated transmission congestion on key paths in the west. Source: Western Interconnection Transmission Path Flow Study, SSG-WI, February 2003 Tapping the potential excess capacity on the existing transmission system is problematic under many existing open-access transmission tariffs. Many transmission tariffs differentiate between network service and point-to-point service. For point-to-point service, a generator can obtain firm service for a period of up to 10 years if sufficient available transmission capability (ATC)...
